```
/***

    PageDirectory
        creates a searchable directory of pages organized by tabs and
filtered by tags

    Arguments:

    path : str (optional, default: currnt page path)
        page path the the parent page where the subpages to be organized
are located

    most_popular : map (optional, default: none)
        show section for most popular pages that have a given tag

        tag : str
            tag to used for the split between left and right columns for
most popular;
            left pages have the tag, right pages do not

        title : str
            title shown for left column

    tabs : list (optional, default: empty list)
        list of maps describing each tab to show; map entries may contain
the following fields

        label : str
            label for the tab

        key : str
            key used to identify the selected tab

    featured_limit : num (optional, default: 15)
        number of pages to show in the "Featured" category

    cache_prefix : str (optional, default: none)
        when set, caches the page directory for a given view using this
key

    tag_constraint : str -or- list (optional, default: none)
        only list pages that have all of the specified tags

***/
