{{Template('MindTouch/OOBE/Core/License');}}

- **DekiScript**

  DekiScript is the safe lightweight scripting language used for rapid application development inside MindTouch. Try this in the editor to get started:

```
{{
if (!user.anonymous)
    {"Welcome "..user.name;}
}}
```

  ### Dynamic Templates

  Get started now! Use these sample to start your first DekiScript app today.

  1. Hello World
  2. Properties: User, Page and Site
  3. Native Functions

  {{wiki.create{label:"create a template", title:"New template created by "..user.name, path:"Template:", button:false}}}

- **API**

  The MindTouch API exposes all the functionality of MindTouch through a REST-based API. Here are some sample endpoints:

  1. {{web.link(site.api.."/pages/"..page.id,"This page's XML")}}
  2. {{web.link(site.api.."/users/"..user.id,"Your user's XML")}}
  3. {{web.link(site.api.."/pages/popular","Popular Pages XML")}}

  Learn more with our API documentation.

  ### MindTouch Extensions

  Here's a preview of the extensions on your MindTouch:

  1. Google
  2. RSS Feeds
  3. Flickr

  You can write your own extensions in any language, including PHP and C#.

- **Technical Documentation**

```
<h1>Template:FrontTalk</h1>
<div class="frontback">
    <div class="front">
        <a href="{{page.fronturi}
    </div>
    <div class="back">
        <a href="{{page.talkuri}}
```

  Using MindTouch to power your developer community? MindTouch has a solution for that.
